<Reason for revisions>

The business environment during first six months of the year ending March 31, 2011 remained in an unstable state because of deterioration in the job market and a sluggish stock market, although the economy was on a recovery trend from the sluggishness that had predominated since 2008. In the electronics industries, mainly the flat-screen TV and automotive markets were robust in the first half, resulting in a better outcome than what was expected at the beginning of this fiscal year, but the market has turned to an adjustment phase after the summer. In addition, a significant appreciation of the yen continued in the foreign exchange market, which negatively affected the overall business performance. The ROHM Group continues to exert itself to find new customers in foreign markets and to strengthen lineups of new products. Furthermore, the group is implementing various measures including production transfers to overseas and further promotion of overseas procurement in order to improve its business performance. However, the effects of the market environment and earnings environment are so grave that the business results in the second half of the current fiscal year are expected to fall below the forecast announced at the beginning of this fiscal year. In consideration of such circumstances, ROHM is revising its business results forecast for the year ending March 31, 2011 as above.

<Notabilia on forecast data>

Since the statement regarding the business results forecast accounted for in this press release is based on current information acquired by ROHM as well as specific legitimate prerequisites, actual business results may be considerably different due to various factors.
